

We Need Good Homes!

Around the start of May 2022, a litter of kittens was born and raised outside the Science Building. Dr. Williams rescued them, and they need good homes! All are dewormed, have FVRCP and rabies vaccinations and are negative for FIV and feline leukemia. By the time they join your household, they'll have been spayed/neutered.

1. **Cheesecake** – the beautiful tabby mom cat. The vet estimates she was born in September 2021. She was semi-feral when rescued and needs a quiet home and patience to finish coming out of her shell. She allows petting but termbles sometimes. She does not yet like to be handled. She is just starting to play with toys and continues to develop into an indoor pet.

2. **Meatball** – a male tabby. He is very playful – cat dancers and feather wands are favorites. He loves food, petting, and butt skritches. He is very much ready to be a loved family pet.

3. **Free Refills** – a female tuxedo. She is gorgeous and very feisty. She hisses a lot as she dances around your feet begging for food. She will eat from my hand and is starting to tolerate petting, but she does not yet permit petting handling. We're working on her, but she probably needs a quiet, child-free household with patient souls to help her settle down.

Adoption Requirements: Verbal promise to keep them indoors and a suggested donation of \$75 to No Kill Hunt County, <http://www.nokillhuntcountypa.org/>
